## **REMARKS**

Claims 1-20 are pending in the application.

Claims 1-20 have been rejected in the Office Action dated October 15, 2010 ("Office Action").

Claims 1-20 remain pending in this application.

Reconsideration of the claims is respectfully requested.

In this Response, the Applicants make no admission concerning any now moot rejection or objection, and affirmatively deny any position, statement or averment of the Examiner that was not specifically addressed herein.

## I. CLAIM REJECTION UNDER 35 U.S.C. §102

Claims 1-3, 7-10, 14 and 16 were rejected under 35 U.S.C. §102(b) as being anticipated by U.S. Patent No.6,968,192 to Longoni ("Longoni"). This rejection is respectfully traversed.

A prior art reference anticipates the claimed invention under 35 U.S.C. § 102 only if every element of a claimed invention is identically shown in that single reference, arranged as they are in the claims. MPEP § 2131, p. 2100-76 (8th ed., rev. 4, October 2005) (*citing In re Bond*, 910 F.2d 831, 832, 15 U.S.P.Q.2d 1566, 1567 (Fed. Cir. 1990)). Anticipation is only shown where each and every limitation of the claimed invention is found in a single prior art reference. *Id.* (*citing Verdegaal Bros. v. Union Oil Co. of California*, 814 F.2d 628, 631, 2 U.S.P.Q.2d 1051, 1053 (Fed. Cir. 1987)).

L:\SAMS01-00313

Independent Claim 1 recites an interrogating state machine comprising a plurality of wireless

communication devices for use in a wireless network in which the interrogating state machine

includes:

a server status store operable to store current server status information

for each of a plurality of servers, the current server status information for

each server comprising load information for the server and capability

information for each server; and

a server assigner operable to collect server status information from the

servers, provide triggers to the servers, and to store the server status information in the server status store as current server status information, and

to assign one of the servers to host one of the wireless communication

<u>devices</u> based on the current server status information, wherein the triggers provided to the servers comprise information related to instructions on under

what time-independent conditions to provide the interrogating state machine

with updated server status information. [Emphasis Added].

The Applicants respectfully submit that Longoni does not anticipate the aforementioned

features of independent Claim 1. In particular, it is submitted that Longoni does not teach or suggest

a server assigner operable to assign one of the servers to host one of the wireless communication

devices based on the current server status information as specifically recited in Applicants' Claim 1.

The Office Action asserts that *Longoni* anticipates the above emphasized element in which

Longoni (col. 2, lines 57-60 and col. 6, lines 38-44) teaches "assigning the appropriate cell, server,

based on the load information." (Office Action, page 3). The Applicants respectfully disagree. The

RNC of Longoni does not assign one of the cells (servers) to host one of the mobile stations (wireless

communication devices) based on the load status (current server status information) of the candidate

cell (server). Rather, the RNC of Longoni merely adds or deletes a particular cell to an active set of

L:\SAMS01-00313

-11-

allowable cells that may be stored in the mobile station based upon the load status of the candidate

cell. (See Longoni, col. 6, lines 41-44 and col. 6, lines 48-50). That is, the RNC of Longoni uses the

load status information to admit, or delete a cell associated with the load status information in an

active set that is stored in the mobile station. The RNC does not specifically assign one server from

among a plurality of servers for hosting the wireless communication device as specifically claimed in

Applicants' Claim 1. Thus, Longoni does not anticipate Claim 1.

Claims 8 and 16 include limitations that are analogous to the unique and nonobvious

limitation emphasized with respect to Claim 1. Claims 2-3 and 7 depend from Claim 1; and Claims

9-10 and 14 depend from Claim 8. Therefore, Claims 2-3, 7-10, 14, and 16 are patentable over

Longoni for at least the same or similar reasons provided with regard to Claim 1.

Accordingly, the Applicants respectfully request the §102 rejection with respect to Claims 1-

3, 7-10, 14 and 16 be withdrawn.

II. <u>CLAIM REJECTION UNDER 35 U.S.C.§103</u>

Claim 15 is rejected under 35 U.S.C. § 103(a) as being unpatentable over Longoni. Claims 5,

6, 12, 13 and 17-20 were rejected under 35 U.S.C. § 103(a) as being unpatentable over Longoni in

view of U.S. Patent Application Publication No. 2003/02106694 to Jayaraman, et al. ("Jayaraman").

Claims 4 and 11 were rejected under 35 U.S.C. § 103(a) as being unpatentable over *Longoni* in view

of what the Office Action characterizes as "the admitted prior art, APA, of Shih, ("APA"). The

Applicants respectfully traverse these rejections.

-12-

ATTORNEY DOCKET NO. 2003.10.023.WS0 U.S. SERIAL NO. 10/811,005

**PATENT** 

Claims 4-6 depend from Claim 1; Claims 11-13 and 15 depend from Claim 8; and Claims 17-

20 depend from Claim 16. The Applicants have shown that Claims 1, 8, and 16 are patentable over

Longoni. Jayaraman does not provide a disclosure that remedies the deficiencies of Longoni, and

APA is not directed to triggers. Therefore, Claims 4-6, 11-13, 15, and 17-20 are patentable over the

prior art of record.

Accordingly, the Applicants respectfully request the §103 rejection with respect to Claims 4-

6, 11-13, 15, and 17-20 be withdrawn.

PATENT

CONCLUSION

As a result of the foregoing, the Applicants assert that the remaining claims in the

Application are in condition for allowance, and respectfully request that this Application be passed to

issue.

If any issues arise, or if the Examiner has any suggestions for expediting allowance of this

Application, the Applicants respectfully invite the Examiner to contact the undersigned at the

telephone number indicated below or at jmockler@munckcarter.com.

The Commissioner is hereby authorized to charge any additional fees connected with this

communication or credit any overpayment to Deposit Account No. 50-0208.

Respectfully submitted,
